SYMBOLS

The following symbols will be used throughout the manual:

⚠️ **WARNING**
Messages with this heading indicate adverse reactions, potential safety hazards or inadequate device performance.

⚠️ **CAUTION**
Messages with this heading indicate/include information regarding any special care to be exercised.

กระจาย Non-ionizing radiation.

วาง Not for general waste.
YOUR NEW TV-DEX

Your TV-DEX is part of the DEX™ family of assistive listening devices. These user instructions explain how the TV-DEX should be operated.

⚠️ WARNING
This booklet contains important information and instructions. Please read this booklet carefully before you start using the device.

Intended use
The TV-DEX is a wireless device intended for listening directly to the TV or other audio sources.

Description of device
The TV-DEX allows the user to listen to audio input using WidexLink for connection to Widex hearing aids.

We hope you will be pleased with your DEX™ TV-Controller and TV-Base. These user instructions explain how these units should be operated. Please read this booklet carefully before you start using the units.

1. TV-Controller
2. TV-Base
TV-CONTROLLER

The controller is provided with four keys:

1. Transmission on/off
2. Room off
3. Volume up
4. Volume down
TV-BASE

On the back of the base you will find the following inputs:

1. Power
2. TV
3. Audio

On the underside of the base there is a switch with a choice of two settings:

1. Monaural/binaural switch
The setting chosen by your hearing care professional depends on whether you use a hearing aid in only one ear (monaural) or in both ears (binaural).
LIGHT-EMITTING DIODES

There are two light-emitting diodes (LEDs) on the controller.

1. **Constant green light:** Transmission
2. **Changing from green to red:** Transmission off
3. **Constant red light:** Room off active
4. **Flashing red and green light:** Battery charging
GETTING STARTED

You can skip steps 5+6 if you only wish to transmit from the TV, and steps 3+4 if you only wish to transmit from an audio source.

CONNECTING THE UNITS:
1. Connect the mini-USB power supply unit to the base.
   (The supply unit is available in four versions. Your supply may therefore not look exactly as illustrated).
2. Plug the other end into a wall outlet.
3a. Connect the jack to phono cable to the base.

4a. Plug the two phono connectors at the other end of the cable into AUDIO OUT on the TV. Please refer to the user guide for your TV for further details.
For European markets only: If the TV has no AUDIO OUT, a SCART adaptor should be used:

3b. Connect the phono connectors to the two terminals on the included SCART adaptor (red to red and white to white).

4b. Plug the SCART adaptor into the TV’s SCART socket.
5. Plug the jack to jack cable into the audio input on the base.
6. Connect the other end to the audio source (e.g. a stereo system).
7. Place the controller in the base and allow it to charge for eight hours (the first time).
WHEN USING MORE THAN ONE TV-BASE
If you only have one base, this base is automatically selected the first time you charge the controller in the base. If you have more than one base, you can change between these by placing the controller in the base you wish to use for approx. 5 seconds.
**USAGE**

When appropriate, the TV controller may be attached to the lanyard in your package contents to wear around the neck as a convenience.
CAUTION FOR PACEMAKER USERS

(Risks) The use of the CLEAR/DEX should not interfere with other devices such as a pacemaker. However, to be extra cautious, Widex follows the guidelines recommended by the manufacturers of implantable defibrillators and pacemakers for their patients when using mobile phones. Specifically, hearing aid wearers who also use a pacemaker should

• Keep the hearing aids at a distance of at least 15 cm/½ foot away from the pacemaker and
• Do not carry the hearing aids (and/or any of the DEX accessories) in a shirt pocket or close to the chest.
• If any interference is observed, do not use the hearing aids (and/or DEX) and contact your pacemaker manufacturer and hearing healthcare professional immediately.
INSTRUCTIONS FOR LANYARD USAGE
Place the controller in the plastic holder at the end of the lanyard as illustrated.

⚠️ WARNING
The breakaway buckle of the lanyard must be positioned at the back of your neck (1).
TRANSMISSION
With either TV or audio connected

• Press the transmission on/off key on the controller once to start transmitting from the connected source. An acoustic signal will sound in your hearing aids, and the transmission LED will turn green.
• Press the key again once to stop transmission. The hearing aids will enter the Master program as indicated by a voice message or beep tones. The green LED will change briefly to red and then off.

With both TV and audio connected:
• Press the transmission on/off key on the controller once to start transmission from the TV. An acoustic signal will sound in your hearing aids, and the transmission LED will turn green.
• Press the key a second time to transmit sound from the audio source instead. An acoustic signal will sound in your hearing aids.
• Press the key a third time to stop transmission. The hearing aids will enter the Master program, as indicated by a voice message or beep tones. The green LED will change briefly to red and then off.
If you carry your controller around with you and move outside the operating range, transmission will be interrupted and your hearing aids will switch to the Master program. The LED will flash at slow intervals to indicate that transmission has been interrupted. The change will be indicated by a voice message. If your hearing aids are set up with beep-tone indication instead, no acoustic indication will sound.

If you come in range again, the controller will detect the signal from the TV/Audio and restart transmission. A sound will be heard in the hearing aids. The LED will light constantly rather than flash.

Note that the LED may continue to be red if you chose to turn off the hearing aid microphones during transmission.
ADJUSTING THE VOLUME
Press the volume up key to raise the volume of the transmitted TV or audio sound. Press the volume down key to lower the volume.

MUTE
You can mute the transmitted TV or audio sound on the TV or audio source.

ROOM OFF
If you wish to turn the hearing aid microphones off during transmission, so that you only hear the transmitted sound, press the room on/off key once. To turn the microphones back on, press again. An acoustic indicator will sound in your hearing aids, and the red LED will turn off.
RECHARGING THE BATTERY
The controller uses a rechargeable battery. When fully charged, the battery has a capacity of approx. 10 hours of transmission, decreasing over time. When the battery runs low, transmission is interrupted. To recharge the battery, place the controller in the base for approximately 4 hours.

You can also recharge the battery using an appropriate USB power supply supplied by Widex.

Contact your hearing care professional if the battery needs replacement.

⚠️ WARNING
Do not attempt to change the battery yourself. Contact your hearing care professional if the battery needs replacement.
## TROUBLESHOOTING

CARING FOR YOUR TV-DEX

The device is a valuable object and should be treated with care. Here are some things you can do to prolong the life of your TV-DEX:

⚠️ WARNING
- Do not expose the device to extreme temperatures or high humidity.
- Do not immerse in water or other liquids.
- Do not carry your TV-DEX with you during X-rays, MRIs or other scans or radiation treatments and never place it in a microwave oven. These are some of the types of radiation that can damage the device.

⚠️ CAUTION
- Never try to open or repair the device yourself. (This should only be done by authorized personnel.)
- Clean the device with a soft cloth. Never wash it with water, cleaning solutions or other liquids.
- Avoid dropping the TV-DEX.
- When the device is not in use, keep it in its case in a cool, dry location out of reach of children and pets.
WARNINGS

⚠️ WARNING
• Keep the TV-DEX and its parts and accessories out of reach of children and anyone else who might swallow parts of the device, or otherwise cause injury to themselves with these items. In case of ingestion, contact a physician immediately.
• Do not use the device on aircraft or in hospitals without permission.
• Do not use the device in mines or other areas with explosive gases.
• If you wear your TV-DEX around your neck, make sure that the breakaway buckle on the lanyard is always at the back of your neck.

⚠️ CAUTION
• Although the device has been designed to comply with the most stringent international electromagnetic compatibility standards, the possibility cannot be excluded that it may cause interference with other equipment, such as medical devices.
SAFETY WARNING

This device is powered by an external power supply.

- Only connect a power supply that is compatible with the TV-DEX.
- The power supply must have an output rating of 5VDC, 500mA, and a mini USB connector.
- The power supply input rating voltage and wall plug must be compatible with the AC wall outlet in your region.
- The power supply must have the certification marks showing certification by a safety agency acceptable in your region.

Widex strongly recommends that you always use a power supply unit that is supplied by your Widex Distributor to ensure safe and efficient use of your TV-DEX.
The following Table summarizes the technical details of the WidexLink technology as it is implemented in the CLEAR hearing aids.

* EIRP = Equivalent isotropically radiated power.

**Benefits** The use of wireless transmission allows convenient and synchronized control of hearing aid functions. The CLEAR wireless hearing aids share input information between the two partner hearing aids. In so doing, the wearers would experience the following additional user benefits (only when wearing binaural CLEAR hearing aids).

* **Synchronization of volume control setting between hearing aids** – The volume in both hearing aids will change when the VC is adjusted on one ear.

* **Synchronization of listening programs between hearing aids** – The same listening program is used in both hearing aids when one is changed by the user.

* **Surveillance of partner hearing aid** – The hearing aid(s) will signal an alert (“partner check”) when a hearing aid battery has expired, or that one of the hearing aids has fallen off. In rare instances, a much stronger wireless source nearby may activate this alert. This serves as an early warning to the wearer of such service interruption.
Coordination of compression – The CLEAR hearing aids maintain the intensity level difference between ears (inter-aural level difference, ILD). In some situations where speech is presented to one side and noise the other side, this coordinated action could enhance the relative loudness of the speech sounds to the noise background and improve speech understanding for some wearers.

More accurate identification of feedback – The CLEAR hearing aids distinguish between “true” hearing aid whistling (or feedback) and music sounds to prevent unnecessary feedback cancellation and preserve natural sound quality.

(Contraindications):
• Congenital or traumatic deformity of the ear
• Active drainage from the ear within 90 days
• History of rapid progressive hearing loss within previous 90 days
• Acute or chronic dizziness
• Sudden unilateral hearing loss in previous 90 days

The TV-DEX contains radio transmitters / receivers with the following

TV-BASE radio transmitter parameters:
• Frequency (range): 2.45 GHz (2.4 – 2.5 GHz)
• Bandwidth: 2 MHz
• Channel: 17 logical channels
• Modulation: GFSK
• Radiated output power: 2.5 mW / +4 dBm
• Magnetic field strength: N/A
• Duty Cycle: 100 % (averaged over 1 hour of operation)
• Time division duplex (TDD)
TV-CONTROLLER radio 1 transmitter parameters:
- Frequency (range): 2.45 GHz (2.4 – 2.5 GHz)
- Bandwidth: 2 MHz
- Channel: 17 logical channels
- Modulation: GFSK
- Radiated output power: 2.5 mW / +4 dBm
- Magnetic field strength: N/A
- Duty Cycle: 100 % (averaged over 1 hour of operation)
- Time division duplex (TDD)

TV-CONTROLLER radio 2 transmitter parameters:
- Frequency (range): 10.6 MHz (10.2 – 11.0 MHz)
- Bandwidth (-15dB): 660 kHz
- Channel: Single channel radio
- Modulation: FSK
- Radiated output power: 11 nW / -49 dBm
- Magnetic field strength: -9 dBµA/m @ 10 m
- Duty Cycle: 100 % (averaged over 1 hour of operation)
- Simplex

The radio receivers in the TV-BASE and TV-CONTROLLER are using the same frequency and bandwidth as the corresponding transmitter.

Cables and transducers:
The TV-BASE is using a standard 3.5 mm jack to 3.5 mm jack or phono to 3.5 mm jack cable for audio input signal.
Quality of Service for Wireless Technology in the WidexLink System

WidexLink wireless technology enables communication between two partners of a binaural pair of CLEAR hearing aids and with their matched external devices. The requirements for the quality of service (QoS) vary among the various components and their intended user scenarios.

During daily use, the requirements on audio streaming from TV-Controller to hearing aids include a BER better than $10^{-3}$. The communication is simplex with a bitrate of 212 kbits/s. For remote control commands the QoS requirements include a BER better than $10^{-2}$. The lower BER requirement results from redundant transmissions. Each key press results in transmissions of 7 data packages of which only one is needed for a successful communication.

The requirements from TV-Base to TV-Controller include a BER better than $10^{-3}$. The communication is semi duplex with a bit rate of 2Mbits/s and a total latency <10ms (including the link from the TV-Controller to the hearing aids) to insure high quality audio transmission.

Wireless Security Measures

Security of the wireless signals is assured through device system design that includes:

- Individual MAC address for each unit which is checked during each transmission.
- A built-in pairing table which specifies valid and legitimate pairing among units
- A proprietary Widex communication protocol which checks the package numbers during each transmission.
- A Cyclic Redundancy Check (CRC) to check data validity and correct errors.
Guidance and manufacturer’s declaration

Electromagnetic emissions
The TV-DEX is intended for use in the electromagnetic environment specified below. The customer or the user of a TV-DEX should assure that it is used in such an environment.

The TV-DEX is intended for use in the electromagnetic environment specified below. The customer or the user of a TV-DEX should assure that it is used in such an environment.

<table>
<thead>
<tr>
<th>Immunity Test</th>
<th>IEC 60601 Test level</th>
<th>Compliance level</th>
<th>Electromagnetic environment – guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conducted RF</td>
<td>IEC 61000-4-6</td>
<td>3 Vrms</td>
<td>Portable and mobile RF communications equipment should be used no closer to any part of the TV-DEX, including cables, than the recommended separation distance calculated from the equation applicable to the frequency of the transmitter.</td>
</tr>
<tr>
<td>Radiated RF</td>
<td>IEC 61000-4-3</td>
<td>3 V/m</td>
<td>Recommended separation distance $d = 1.2 \sqrt[2]{P}$</td>
</tr>
</tbody>
</table>

- $d = 1.2 \sqrt[2]{P}$ 80 MHz to 800 MHz
- $d = 2.3 \sqrt[2]{P}$ 800 MHz to 2.5 GHz

where $P$ is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and $d$ is the recommended separation distance in metres (m).

Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey, should be less than the compliance level in each frequency range.

Interference may occur in the vicinity of equipment marked with the following symbol:
NOTE 1 At 80 MHz and 800 MHz, the higher frequency range applies.
NOTE 2 These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

a. Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the TV-DEX is used exceeds the applicable RF compliance level above, the TV-DEX should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as re-orienting or re-locating the TV-DEX.

b. Over the frequency range 150 kHz to 80 MHz, field strengths should be less than 3 V/m.

Recommended separation distances

Recommended separation distances between portable and mobile RF communication equipment and the TV-DEX.
The TV-DEX is intended for use in the electromagnetic environment in which RF disturbances are controlled. The customer or the user of the TV-DEX can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the TV-DEX as recommended below, according to the maximum output power of the communications equipment.
For transmitters rated at a maximum output power not listed above, the recommended separation distance \( d \) in metres (m) can be estimated using the equation applicable to the frequency of the transmitter, where \( P \) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

\[
\begin{array}{|c|c|c|c|}
\hline
\text{Rated maximum output power of transmitter W} & \text{Separation distance according to frequency of transmitter m} \\
\hline
\text{150 kHz to 80 MHz} & \text{80 MHz to 800 MHz} & \text{800 MHz to 2,5 GHz} \\
\text{d = 1.2 }\sqrt{P} & \text{d = 1.2 }\sqrt{P} & \text{d = 2.3 }\sqrt{P} \\
\hline
0.01 & 0.12 & 0.12 & 0.23 \\
0.1 & 0.38 & 0.38 & 0.73 \\
1 & 1.2 & 1.2 & 2.3 \\
10 & 3.8 & 3.8 & 7.3 \\
100 & 12 & 12 & 23 \\
\hline
\end{array}
\]

NOTE 1 At 80 MHz and 800 MHz, the higher frequency range applies.

NOTE 2 These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

This TV-DEX may be interfered with by other equipment even if that other equipment complies with CISPR emission requirements.
The TV-DEX complies with the following EMC/EMI standards:

<table>
<thead>
<tr>

**Important notice for prospective hearing aid users**

Good health practice requires that a person with a hearing loss have a medical evaluation by a licensed physician (preferably a physician who specializes in diseases of the ear) before purchasing a hearing aid. Licensed physicians who specialize in diseases of the ear are often referred to as otolaryngologists, otologists, or otorhinolaryngologists. The purpose of medical evaluation is to assure that all medically treatable conditions that may affect hearing are identified and treated before the hearing aid is purchased.
Following the medical evaluation, the physician will give you a written statement that states that your hearing loss has been medically evaluated and that you may be considered a candidate for a hearing aid. The physician will refer you to an audiologist or a hearing aid dispenser, as appropriate, for a hearing aid evaluation.

The audiologist or hearing aid dispenser will conduct a hearing aid evaluation to assess your ability to hear with and without a hearing aid. The hearing aid evaluation will enable the audiologist or dispenser to select and fit a hearing aid to your individual needs.

If you have reservations about your ability to adapt to amplification, you should inquire about the availability of a trial-rental or purchase-option program. Many hearing aid dispensers now offer programs that permit you to wear a hearing aid for a period of time for a nominal fee after which you may decide if you want to purchase the hearing aid.

Federal law restricts the sale of hearing aids to those individuals who have obtained a medical evaluation from a licensed physician. Federal law permits a fully informed adult to sign a waiver statement declining the medical evaluation for religious or personal beliefs that preclude consultation with a physician. The exercise of such a waiver is not in your best health interest and its use is strongly discouraged.

**Children with hearing loss**

In addition to seeing a physician for a medical evaluation, a child with a hearing loss should be directed to an audiologist for evaluation and rehabilitation since hearing loss may cause problems in language development and the educational and social growth of a child. An audiologist is qualified by training and experience to assist in the evaluation and rehabilitation of a child with a hearing loss.

Federal Communications Commission Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
— Reorient or relocate the receiving antenna.
— Increase the separation between the equipment and receiver.
— Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
— Consult the dealer or an experienced radio/TV technician for help.

NOTE:
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Changes or modifications to the equipment not expressly approved by Widex could void the user’s authority to operate the equipment.

Industry Canada Statement / Déclaration d’industrie Canada
Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) this device may not cause interference, and
(2) this device must accept any interference, including interference that may cause undesired operation of the device.

Conformément à la réglementation d’Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d’un type et d’un gain maximal (ou inférieur) approuvé pour l’émetteur par Industrie Canada.

Dans le but de réduire les risques de brouillage radioélectrique à l’intention des autres utilisateurs, il faut choisir le type d’antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l’intensité nécessaire à l’établissement d’une communication satisfaisante.

Le présent appareil est conforme aux CNR d’Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes:

(1) l’appareil ne doit pas produire de brouillage, et
(2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.
Hereby, Widex A/S declares that this TV-CONTROLLER and TV-BASE are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

A copy of the Declaration of Conformity can be found at: http://www.widex.com
Hearing aids, accessories and batteries should not be disposed of with normal household waste. Please consult your national Widex distributor for advice on how to dispose of these items.
